

ANTI-SLIP DECKING OIL

Binding agent:

Based on renewable plant raw materials:

- > Safflower oil
- > Linseed oil
- > Soybean oil
- > Sunflower oil

Solvents:

- > Aliphatic hydrocarbons = dearomatised white spirit (benzene-free)

Additives:

- > Siccatives (are obtained from minerals and are lead-free)
- > Ketoximes
- > Polysiloxanes (based on silica)
- > UV-Absorber
- > Polypropylene co-polymer

The substances listed are used for even drying, the prevention of skin formation (5-year storage stability) and a strong water-repellent and anti-slip effect.

UV absorber serves as light protection to increase weather and aging resistance.

Active agents (film protection):

- > IPBC (CAS 55406-53-6 3-iodo-2-propynylbutylcarbamate)

Anti-Slip Decking Oil contains biocidal active ingredients to protect the coating against algae and fungal attack (film protection)

Further information, e.g. about the technical properties, can be found in the product information sheet.

The above mentioned information is provided to the best of our knowledge however without any liability.
